

## **A-Eye Tech Powering Modern Command Control Centers**

A-Eye Tech's Vision Engine is built to be the intelligence layer at the heart of modern command centers, transforming live video streams into real time, actionable insights across multiple industries. By combining computer vision, AI analytics, and unified dashboards, the Vision Engine enables operators to see, understand, and act faster than ever before.

In **banking and financial services**, the Vision Engine enhances branch command centers by monitoring customer flow, service efficiency, queue behavior, and security events, helping management improve customer experience while maintaining compliance and safety.

In **smart cities and infrastructure**, A-Eye Tech empowers city command centers with traffic analysis, crowd monitoring, incident detection, and operational visibility across districts, enabling proactive decision making and faster emergency response.

For **industrial sites and logistics**, the Vision Engine provides real time visibility into vehicle movements, loading operations, PPE compliance, and site safety, turning complex environments into measurable and controllable operations.

In **retail and commercial facilities**, command centers gain deep insights into visitor behavior, dwell time, heatmaps, and store performance, allowing operators to optimize layouts, staffing, and overall customer engagement.

Across all industries, A-Eye Tech's Vision Engine unifies video intelligence into a single command center view, enabling organizations to move from passive monitoring to intelligent, data driven operations at scale.
